

Bifrost Timesheets

An app for Microsoft Dynamics 365 Business Central, on Bifrost Foundation

BIFROST.
TIMESHEETS

Hours tracked in Clockify, posted in Business Central.

Bifrost Timesheets connects Business Central to Clockify, the time-tracking service. Finished time entries become Job Journal lines or Time Sheet detail, without typing them in again. It is an add-on to Bifrost Foundation.

Clockify hours, ready to check

Ask where the tracked hours stand before you post or invoice them. The assistant reads the project journal, with your own permissions.

Claude with the Bifröst connector, in a Business Central sandbox with demo data.

Use Bifröst in Business Central environment Bifrost, company CRONUS. Which hours from Clockify are waiting in the project journal, by resource and project, and what are they worth? Read only, do not post. A short table, please.

Used Bifröst Origo integration, loaded tools >

Four lines are waiting in project journal batch VERK/CONTOSO in CRONUS (Bifrost). I only read them and posted nothing.

Resource	Project	Hours	Cost value
RESOURCE1	PR00010	4,75	28.500 kr.
RESOURCE2	PR00010	6,00	36.000 kr.
Total		10,75	64.500 kr.

Ask where the tracked Clockify hours stand before you post or invoice them.

What it does

- Brings Clockify hours into the Job Journal: one entry, a date range, or every mapped user at once. An entry synced twice is not duplicated; a changed entry is posted as a correction.
- Or fills Time Sheets: the same entries into the resource's open Time Sheet.
- Runs the Time Sheet week: create, submit, approve, reject, post and archive.
- Keeps Clockify in step with your projects: clients, projects, tasks and tags.
- Syncs as it happens: with Clockify webhooks, new, changed and deleted entries arrive without waiting for a schedule.

Who it is for

Professional services companies that track time in Clockify and bill or cost it in Business Central.
